PROPOSAL & QUOTATION · VC-WEB-2610

VitalCare.mx Website Proposal

Two ways to give VitalCare a fast website that ranks on Google, appears in AI answers and can be used by AI agents, with every homepage section linked to its own landing page and a reliable connection to DrCare for purchases.

Prepared for **Jess, VitalCare** Prepared by **Navneet, VitalCare mobile app team**

Date **25 October 2026** Valid until **24 November 2026** Currency **USD**

AT A GLANCE

The short version

RECOMMENDED

Option A · Rebuild

$19,800

About 15 weeks. Next.js (React) website, Python FastAPI backend, custom admin panel, automatic DrCare sync, full AI and agent readiness.

LOWER COST

Option B · Repair WordPress

$8,900

About 8 weeks. New design built in the current WordPress, SEO repair and clean-up. Platform limits remain.

OPTIONAL

Add-ons

from **$1,100**

Online orders and payments ($2,600 or $9,800), AI assistant, product finder, digital warranty and 11 more features.

MONTHLY

Ongoing services

from **$280**/mo

Hosting and care, SEO and AI-search growth, AI assistant care, flexible development hours.

Included free with Option A: one new Bluetooth device in the VitalCare app

Because this is a large project, we will add one more Bluetooth device to the VitalCare mobile app at no charge, a $2,400 value. Details are in section 11.

01 What we heard

14 Timeline & payments
15 Assumptions & next steps

01 · BRIEF

What we heard

From your brief

1. **An information website.** Customers who want to buy are sent to the DrCare store, so the two sites need a dependable connection.
2. **The homepage design is ready** (desktop). The other pages will follow its style.
3. **Every homepage section links to its own landing page**, hosted on vitalcare.mx.

What we added to the scope

4. Rank on Google and appear in AI answers (Google AI Overviews and AI Mode, ChatGPT, Gemini, Perplexity).
5. Make the site usable by AI agents that research and shop for people.
6. An admin panel for content, products and users, extending to orders, shipments and inventory if you sell online.
7. Room to grow: online orders, payments and AI features, priced separately so you choose.
8. A link to the VitalCare mobile app we built for you.

02 · STARTING POINT

What we found on vitalcare.mx

We checked all 346 pages in the site's sitemap and ran Google's own tests. The full report, VitalCare.mx Website Audit, was sent to you together with this proposal.

AREA	FINDING	STATUS
Mobile speed	Real visitors wait 5.8 s for the main content (Google's target is 2.5 s) and 3.3 s for the server's first response. The homepage fails Core Web Vitals. Mobile scores: 55 (home), 35 (product page).	FAILING
AI agents	Google PageSpeed's new Agentic Browsing check: 1 of 3 passed. No llms.txt, no machine-readable product data, no agent tools.	NOT READY

AREA	FINDING	STATUS
Search basics	0 of 340 pages have a meta description or social preview tags. Structured data covers breadcrumbs only. 127 thin tag pages are indexed.	WEAK
Path to DrCare	141 hand-typed buy links. 6 are broken, 10 point to duplicate "-copia" products, and none show price or stock.	LOSING SALES
Health content	No named authors, medical reviewers or sources. Google holds health topics to its strictest quality standard.	TRUST GAP
Technology	WordPress with a theme, Elementor, four Elementor add-on packs and 18+ plugins, an old page builder's leftover code, and store pages that no longer sell.	HEAVY
Strengths	152 products and 30 well-chosen health articles. All of it carries over, with a permanent redirect for every old address.	KEEP

Your distributor is already ahead. DrCare's Shopify store publishes an agent shopping endpoint (Universal Commerce Protocol, launched by Shopify and Google in January 2026), an llms.txt guide for AI tools, and full product data. AI agents can already buy VitalCare products from DrCare, but they cannot learn about them from VitalCare. The new site should make VitalCare the source agents quote, while DrCare stays the place they buy.

03 · WHY NOW

Search has changed. Your website now has three audiences.

Websites used to be built for people and for Google's list of links. In 2026 a growing share of health-product research starts with an AI answer, and AI agents can now compare products and complete purchases for people. That is why we plan this website from the point of view of agentic AI.

AUDIENCE 1

People

Mostly on phones, many of them older adults and caregivers. They need pages that load quickly, read clearly, work with accessibility tools and feel trustworthy.

We deliver: fast pre-rendered pages, WCAG 2.2 AA accessibility, reduced-motion support, visible expert authorship.

AUDIENCE 2

Google and AI answers

Google says its AI Overviews and AI Mode rely on the same fundamentals as regular search: pages that can be crawled, are fast, and give clear, expert answers. Many AI crawlers do not run JavaScript, so the full content must be in the HTML.

We deliver: server-rendered HTML, complete Schema.org data, question-led content, author and reviewer markup.

AUDIENCE 3

AI agents

Assistants such as ChatGPT, Gemini and Claude can now call a website's tools directly instead of reading it like a person. Google's PageSpeed Insights already scores this as "Agentic Browsing".

We deliver: llms.txt, an MCP server with product and guide tools, WebMCP actions in the browser, an open product API.

Is WordPress good for SEO? Yes, WordPress can rank. Google does not rank sites by the technology behind them, and plugins make basic SEO easy to manage. The problems on vitalcare.mx come from how the site was built up over time, not from WordPress itself. We still recommend the rebuild because ranking in 2026 also depends on speed, structured data and agent access. A purpose-built platform delivers all three by design, while a page builder with 18+ plugins can only be patched toward them.

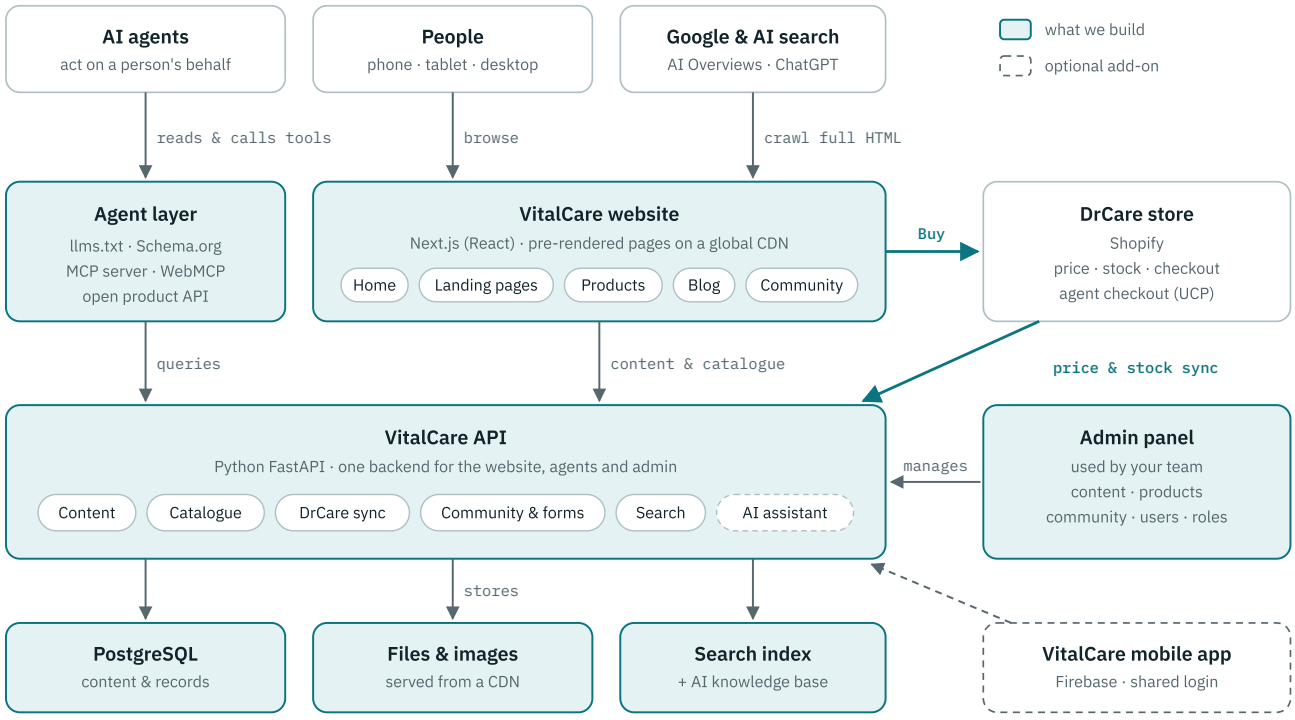

04 · RECOMMENDED

Option A · Rebuild on Next.js (React) and Python FastAPI

A new website, backend and admin panel built for VitalCare, with all existing content and rankings carried over.

LAYER	TECHNOLOGY	WHY WE CHOSE IT
Website	Next.js 16 (React, TypeScript)	Pages are pre-rendered on the server, so Google and AI crawlers receive complete HTML and phones get content fast from a global CDN. We use Next.js rather than a plain React app, because a plain React app sends crawlers an almost empty page.
Backend	Python FastAPI	Fast and modern. It publishes machine-readable API documentation (OpenAPI) automatically, which agents can use. Python is the main language of AI tooling, so the assistant, search and MCP server live in the same codebase.
Database	PostgreSQL with pgvector	Reliable for content and records. pgvector adds the AI search used by the assistant.

LAYER	TECHNOLOGY	WHY WE CHOSE IT
Admin panel	React, role-based access	Built around your team's tasks rather than a generic dashboard.
Hosting	Vercel or AWS, in VitalCare's own accounts	A global CDN for speed. AWS also has a region in Mexico if you want data kept in the country.
AI and agents	Schema.org, llms.txt, MCP, WebMCP, model-agnostic AI	Open standards, so VitalCare is not tied to one AI vendor. The assistant can run on Claude, OpenAI or Gemini models.

Option A. One Python backend serves the website, AI agents and your admin panel. Products, prices and stock flow in from DrCare automatically, so every Buy button leads to the right DrCare page and broken links are reported to the team.

MODULE	WHAT YOU GET	PRICE
A1 · Discovery	**Discovery, content map and SEO migration plan** Workshops, the list of landing pages, a keyword and question map, and a redirect map for all 346 current URLs.	$800
A2 · Design	**UX and UI design** Tablet and phone versions of your homepage, 16 landing-page templates in the same style, motion details and the admin panel screens. Two revision rounds each.	$2,400

MODULE	WHAT YOU GET	PRICE
A3 · Website	**Website frontend in Next.js (React)** Homepage with sliders and animations, all templates, site search, WhatsApp button, WCAG 2.2 AA accessibility, reduced-motion support.	$4,400
A4 · Backend	**Backend in Python FastAPI and PostgreSQL** Content and catalogue APIs. DrCare product sync every 15 minutes (price, stock, link) with broken-link alerts. Forms for contact, stories, testimonials and the monthly challenge, with spam protection. Newsletter connection.	$3,200
A5 · Admin	**Admin panel** Pages, homepage sections, blog with medical review, products, community moderation, SEO, users and roles (details in section 08).	$3,000
A6 · SEO	**SEO and AI-search foundation** Meta and social tags, Schema.org (Organization, Product, Article with author and reviewer, FAQ, Breadcrumb), sitemaps, speed budgets, GA4, Search Console, Clarity, cookie consent.	$900
A7 · Agents	**Agent layer** llms.txt generated from the admin, Markdown copies of key pages, a read-only MCP server (search products, product details, where to buy, guides, FAQs), WebMCP actions, AI-crawler rules, public product feed.	$1,200
A8 · Migration	**Content migration and redirects** 152 products, 30 articles, pages and images moved over. A permanent (301) redirect for every old URL. Tags merged into clean topics.	$800
A9 · Testing	**Quality assurance** Real iOS, Android and desktop devices. Accessibility, speed, security (OWASP Top 10) and load testing, plus your acceptance testing.	$1,300
A10 · Launch	**Cloud setup and launch** Hosting in VitalCare's accounts, automatic deployments, a staging site, backups, monitoring, launch day and a 30-day warranty.	$700
A11 · Management	**Project management** A weekly demo on the staging site, a shared progress tracker and one point of contact.	$1,100
Option A total · about 15 weeks · includes the free app device integration		**$19,800**

Also built in: fields for COFEPRIS sanitary registration numbers and required health notices on each product, a privacy notice and consent flow aligned with Mexico's personal data protection law, and a medical-review step before health articles go live.

05 · LOWER COST

Option B · Repair and redesign the current WordPress site

We keep WordPress, rebuild the pages in Elementor to match your new design, and fix the problems found in the audit.

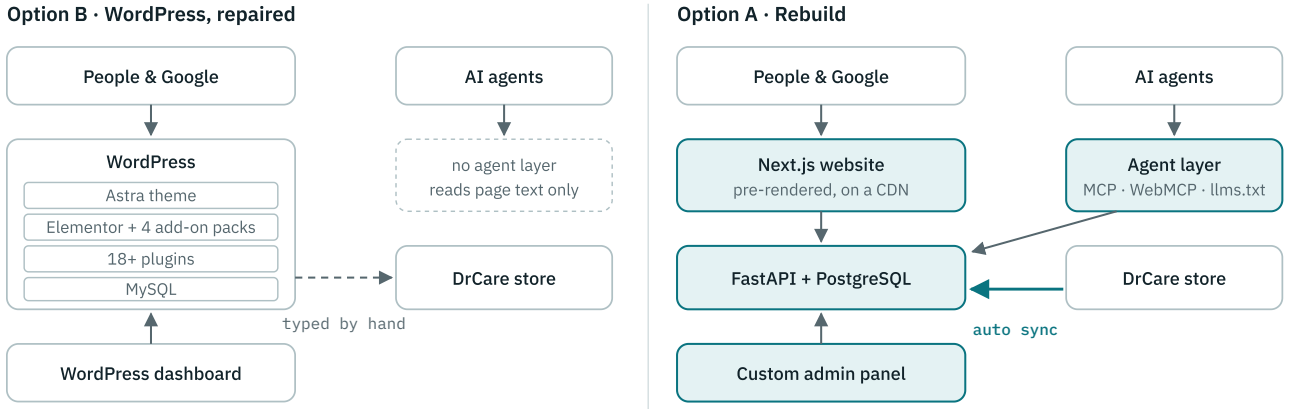

MODULE	WHAT YOU GET	PRICE
B1 · Clean-up	**Clean-up and repair** Remove unused plugins and the leftover store pages, clear old page-builder code, fix the 6 broken DrCare links and the failing article, hide usernames, harden security.	$900
B2 · Homepage	**New homepage in Elementor** Your design, built for desktop, tablet and phone.	$1,400
B3 · Landing pages	**Landing pages** Design and build of 16 landing pages in Elementor, in the homepage's style.	$3,000
B4 · SEO	**SEO repair** An SEO plugin, meta and social tags for every page, basic Schema.org, headings, alt text, and removal of thin tag pages from Google.	$1,100
B5 · Speed	**Speed tuning** Caching, image and database clean-up, CDN setup. Results are limited by the theme and page builder.	$700
B6 · AI basics	**Basic AI readiness** llms.txt through a plugin, AI-crawler rules, schema through a plugin.	$300
B7 · Community	**Community forms** Story, testimonial and monthly-challenge forms using a forms plugin.	$600
B8 · Delivery	**Testing, launch and project management** Device testing, launch and a 30-day warranty.	$900
Option B total · about 8 weeks		**$8,900**

What stays the same with Option B

- Buy links to DrCare are still typed and checked by hand. No live price or stock.
- Speed improves but stays limited by the theme, Elementor and its add-ons.
- No MCP server, open product API or agent tools. Only the basic llms.txt.
- 18+ plugins still need monthly updates and compatibility testing, plus about $350 to $500 a year in plugin licences.
- The add-ons in sections 09 and 10 depend on the Option A platform. For Option B they would be quoted separately, plugin by plugin.

06 · DECISION

Comparing the options

What changes between the options. In Option B, links to DrCare are typed by hand and AI agents only get page text. In Option A, DrCare data flows into the backend automatically and agents get their own entrance to the same data.

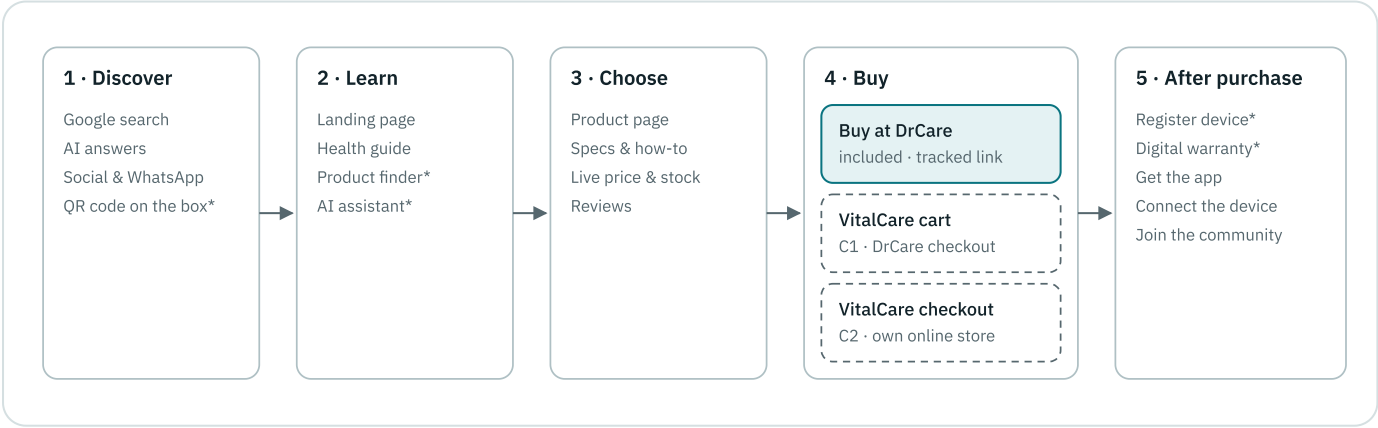

CRITERION	OPTION A · REBUILD	OPTION B · REPAIR
Matches your new design	**Exactly, with custom motion**	**Closely, within Elementor's limits**
Mobile speed (Core Web Vitals)	**Built to pass: main content in under 2.5 s**	**Better than today, still limited**
DrCare connection	**Automatic sync, live price and stock, broken-link alerts**	**Manual links**
Google and AI answers	**Complete structured data from real product data**	**Basic, through plugins**
AI agents	**llms.txt, MCP server, WebMCP, open API**	**llms.txt only**

CRITERION	OPTION A · REBUILD	OPTION B · REPAIR
Admin panel	**Built for your workflows, with roles and medical review**	**WordPress dashboard and plugins**
Security and upkeep	**No plugins to patch, no licences**	**18+ plugins, about $350–500 a year in licences**
Online orders later	**Add-on C1 or C2, no rework**	**WooCommerce, quoted separately**
Shared backend with the mobile app	**Yes, optional add-on**	**No**
Free app device integration	**Included**	**Not included**
Time to launch	About 15 weeks	About 8 weeks
Investment	**$19,800**	**$8,900**

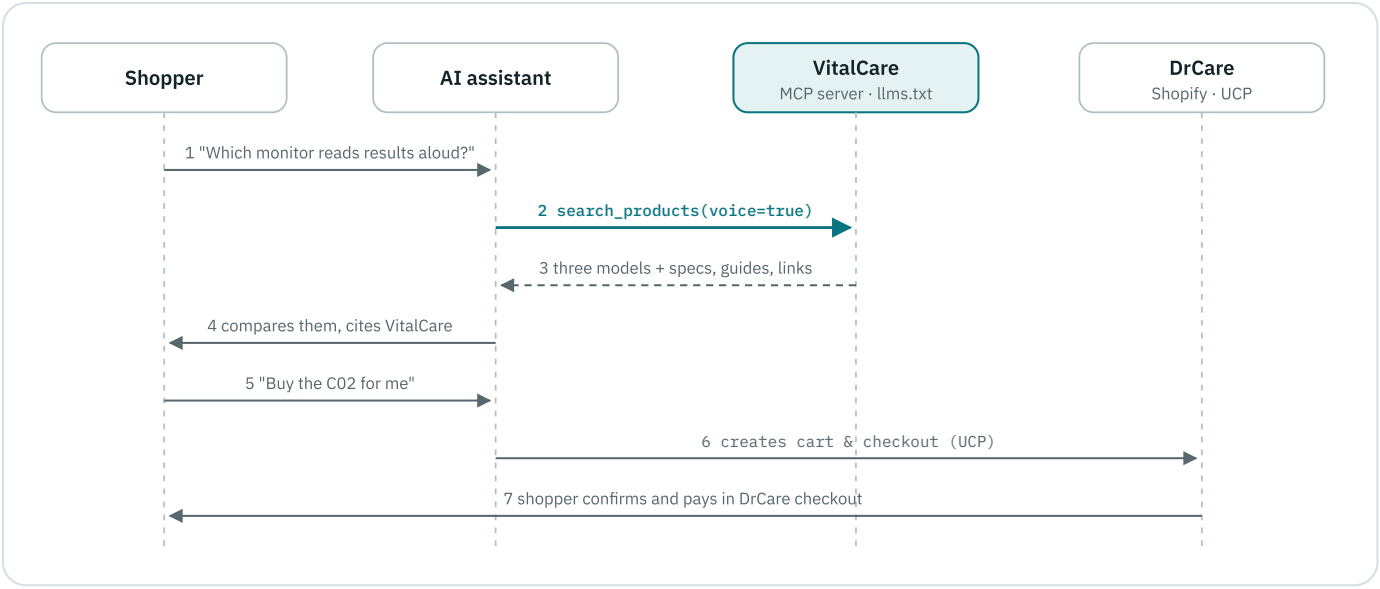

Why the rebuild is better value than the price gap suggests. About half of Option B's cost ($4,400 for the homepage and landing pages) goes into rebuilding pages inside the current page builder. That work would be lost if VitalCare rebuilds later. Option A spends that budget on a platform that keeps up with AI search, connects to DrCare and the mobile app, and grows module by module without starting over.

07 · PICTURES

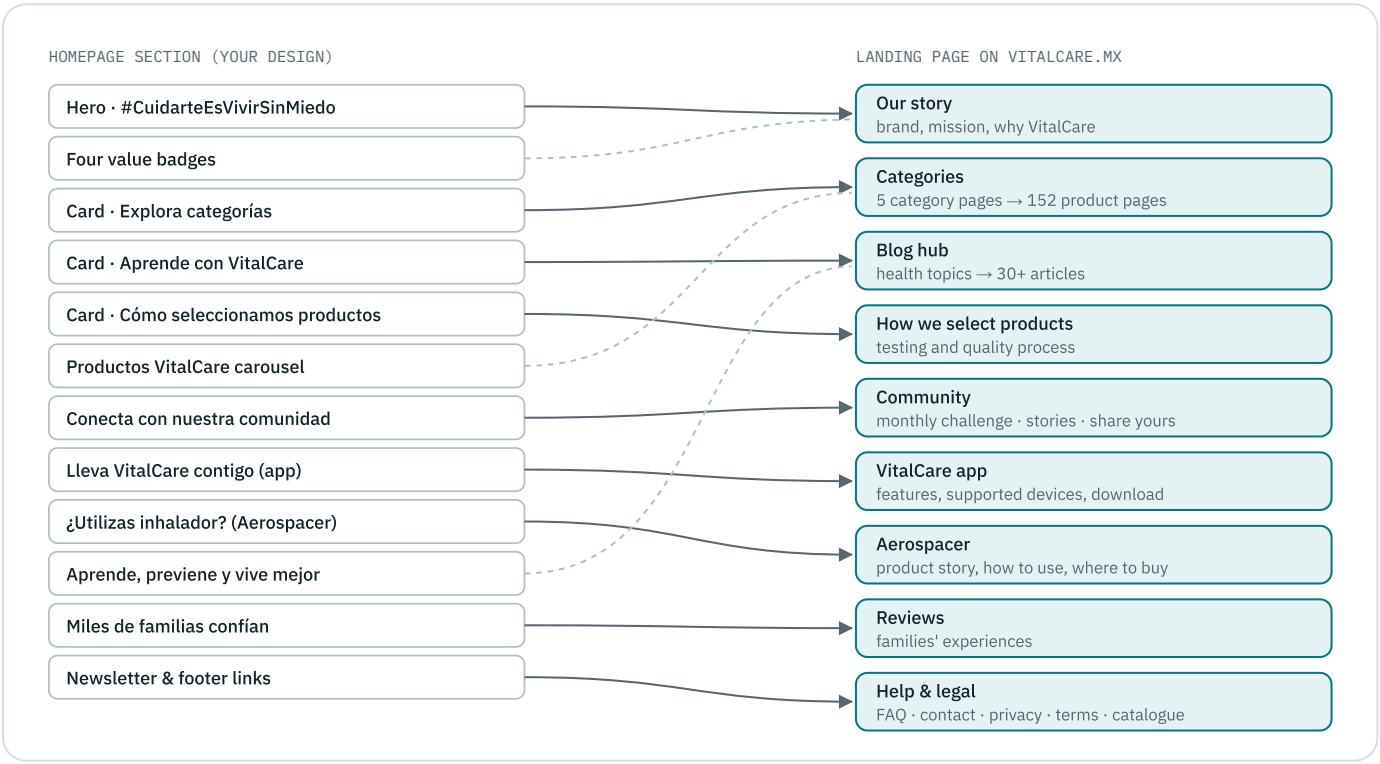

How it will work

The customer journey. Step 4 shows the three ways to buy: the DrCare link included in both options, or the add-ons C1 and C2 in section 09. Items marked * are optional features from section 10.

How an AI assistant would use the new site. VitalCare answers the product question with its own data and guides, and DrCare's existing agent checkout completes the sale. The three models are real VitalCare monitors with voice results: YE670A, YE680B and C02.

Every homepage section in your design leads to a landing page on vitalcare.mx, as the brief asks. Solid lines are each page's main entry. Dotted lines show sections that lead to a page that already has an entry: the value badges go to Our story, the product carousel to the category pages, and the articles strip to the blog.

08 · YOUR TEAM'S TOOLS

Admin panel

One login for your team, with roles so that each person sees only what they manage: for example marketing, community manager, medical reviewer and administrator. Every change is logged.

Included in Option A

Dashboard
visits, DrCare clicks, new leads, sync status

Pages & landing pages
build pages from approved section blocks

Homepage & banners
hero slides, promos, scheduling

Blog & medical review
draft → review → publish, authors, sources

Products & categories
DrCare sync, rich content, COFEPRIS fields

Community moderation
stories, testimonials, challenge entries

FAQs & guides
feeds the site, Google and agents

Media library
images resized and optimized automatically

SEO & redirects
titles, descriptions, schema preview, 301s

AI & agent settings
llms.txt, MCP tools, AI-crawler rules

Leads & newsletter
contacts, consent, export

Users, roles & activity log
who can do what, and who did what

Added with the online store (add-on C2)

Orders
status, notes, cancellations

Shipments
carrier rates, labels, tracking

Inventory
stock per warehouse, low-stock alerts

Customers
accounts, order history, consent

Payments & refunds
gateway reconciliation

Invoices (CFDI 4.0)
automatic e-invoices

Coupons & promotions
codes, rules, dates

Sales reports
by product, channel, campaign

With add-on C1, orders, payments and shipping stay in DrCare's Shopify, and the admin panel shows a read-only view of orders that came from VitalCare and current stock. Feature add-ons such as the AI assistant or digital warranty add their own admin screens.

---

09 · ADD-ON

Online orders and payments

Your brief keeps purchases on DrCare, and Option A already includes that: synced "Buy at DrCare" links with price, stock and tracking. If VitalCare later wants customers to order without leaving the site, there are two ways to do it.

RECOMMENDED NEXT STEP

C1 · VitalCare cart with DrCare checkout

$2,600 · about 2–3 weeks

- "Add to cart" on VitalCare pages and a slide-out cart
- Live price, stock and discount codes from DrCare's Shopify
- Checkout, payments, shipping and invoices handled by DrCare's existing Shopify checkout
- One inventory and one order system, with nothing duplicated
- Admin: read-only view of orders that came from VitalCare

Needs DrCare's approval for a Shopify Storefront API key.

FULL INDEPENDENCE

C2 · VitalCare online store

$9,800 · about 6–7 weeks

- Own cart, checkout and customer accounts
- Payment gateway: Mercado Pago, Stripe or Openpay. Cards, OXXO cash, SPEI transfers and interest-free monthly instalments.
- Shipping through Skydropx or Envia.com: rates, labels and tracking for Estafeta, DHL, FedEx and others
- Inventory per warehouse with low-stock alerts
- CFDI 4.0 e-invoicing through Facturama or Facturapi
- Coupons, order emails and WhatsApp notifications, returns, 3-D Secure
- Admin modules for orders, shipments, inventory, customers, payments, invoices and reports

Each extra payment gateway: $700.

Third-party fees are paid by VitalCare directly to each provider: payment gateways typically charge a percentage plus a fixed fee per sale, plus per-label shipping costs and a per-invoice CFDI fee.

More features

Choose any combination. Each one plugs into the Option A platform without rework, now or later.

FEATURE	WHAT IT DOES AND WHY IT MATTERS	TIME	PRICE
D1 · AI assistant	**AI product and care assistant** Answers questions in Spanish about products, set-up and use, grounded only in VitalCare's manuals, guides and FAQs. Recommends products and links to DrCare. Hands off to WhatsApp. Strict rules: no diagnosis, and it refers people to a doctor. Your team can review conversations.	3 wk	$3,200
D2 · Product finder	**Smart product finder** A short guided quiz, for example "Which blood-pressure monitor is right for my mother?", ending in 1–3 recommendations.	1.5 wk	$1,400
D3 · Warranty	**Device registration and digital warranty** A QR code on the box opens registration: serial number, digital warranty, manual, video and app download. Gives VitalCare first-party customer data, which a redirect to DrCare never does.	2 wk	$2,200
D4 · Help center	**Help center** Manuals, video tutorials and a step-by-step troubleshooting guide for each device. Fewer support calls and strong how-to content for search.	1.5 wk	$1,600
D5 · WhatsApp	**WhatsApp Business integration** Topic-based chat entry points and automatic answers through the official WhatsApp Cloud API.	1.5 wk	$1,500
D6 · Health tools	**Health tools and calculators** Blood-pressure reading classifier, BMI, healthy weight range and an SpO_2 guide, each with "consult your doctor" guidance. These pages tend to earn links and AI citations.	1 wk	$1,200
D7 · Community Pro	**Community Pro** Monthly challenge with sign-ups and progress, stories with photos and consent, verified star ratings shown in Google results. Basic community forms are already in Option A.	2 wk	$2,000
D8 · English	**English version** A full English site with correct language tags for Google. AI-assisted translation with human review.	1.5 wk	$1,800

FEATURE	WHAT IT DOES AND WHY IT MATTERS	TIME	PRICE
D9 · Content studio	**AI content studio in the admin** AI drafts of articles, product descriptions, FAQs and SEO text in VitalCare's voice. Nothing publishes without human and medical review.	1.5 wk	$1,800
D10 · App account	**VitalCare app account on the web** Sign in with the same account as the mobile app, see the family's readings history on a larger screen, and download a PDF report for the doctor. Built with health-data privacy controls.	3 wk	$3,900
D11 · Where to buy	**Where-to-buy locator** A map of pharmacies and retail partners, plus online stores.	1 wk	$1,100
D12 · Professionals	**Professional and distributor portal** A gated area for doctors, clinics and distributors: price lists, bulk quote requests and catalogue downloads.	2.5 wk	$2,600
D13 · Marketing	**Personalised newsletter and automation** Segments by interest (diabetes, respiratory, blood pressure), welcome and follow-up emails, through Brevo, Mailchimp or Klaviyo.	1 wk	$1,200
D14 · Analytics	**Growth analytics dashboard** In the admin: DrCare clicks by product, page and campaign, top site searches, the questions people ask the assistant, and best-performing content.	1 wk	$1,400
Smart Care bundle: D1 + D2 + D4 + D6 (save $1,100)			**$6,300**

11 · COMPLIMENTARY

Free: one new device in the VitalCare mobile app

~~$2,400~~

$0

with Option A

The VitalCare app already pairs with the blood-pressure monitor and the smart scale. With Option A, we will integrate **one more Bluetooth device of your choice** at no charge, for example an oximeter, thermometer or glucometer from the VitalCare range.

- Pairing flow and automatic reading capture to the selected family member
- History, charts, goals and PDF/CSV export for the new reading type
- Testing on Android and iOS, and release through the app stores
- Conditions: the manufacturer's SDK or protocol documentation, two sample units, and the device chosen within 60 days of signing

12 · ONGOING

Monthly services

Monthly services start after launch. SEO results build over 3 to 6 months, so SEO plans have a 3-month minimum. After that, every plan can be cancelled with 30 days' notice.

SERVICE	INCLUDES	PER MONTH
Care & hosting · Option A	Managing the hosting, security updates, daily backups, uptime and speed monitoring, DrCare sync and broken-link monitoring, up to 5 hours of small changes, a monthly health report.	$280
Care & hosting · Option B	The same for WordPress, including monthly plugin, theme and core updates with compatibility testing.	$320
SEO & AI search · Starter	Technical SEO monitoring and fixes, 4 articles a month written for search and AI answers, 8 pages optimized a month, schema upkeep, monthly report on Google and AI visibility.	$650
SEO & AI search · Growth RECOMMENDED	Everything in Starter, plus 8 articles a month, 15 pages optimized (product FAQs and comparisons), 4–6 quality backlinks, tracking of 50 key questions across Google AI Overviews and AI Mode, ChatGPT, Gemini and Perplexity, local SEO and a monthly strategy call.	$1,150
SEO & AI search · Leader	Everything in Growth, plus 12 articles a month, 10+ backlinks and digital PR, YouTube optimization for product tutorials, conversion tests on top pages, tracking of 150 questions and a call every two weeks.	$1,900
AI assistant care · with D1	Knowledge-base updates, conversation review, safety-rule tuning and a monthly report of what customers ask.	$180

SERVICE	INCLUDES	PER MONTH
Development hours	A block of hours for new pages, campaigns and improvements, used as you need: 20 hours for $420, or 40 hours for $800.	from $420

Health articles need sign-off by a qualified reviewer from VitalCare. We can arrange an external medical reviewer at extra cost. Expected third-party running costs, paid directly by VitalCare: Option A cloud hosting about $60–150 a month at today's traffic; AI usage for the assistant or content studio about $30–150 a month depending on volume.

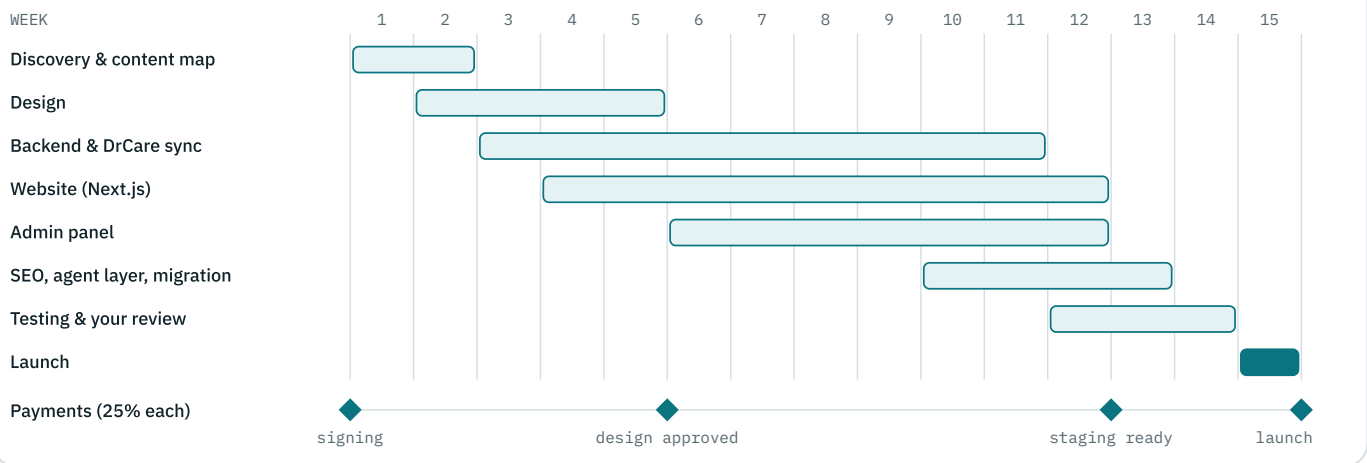

13 · PUTTING IT TOGETHER

Example packages

Three common combinations, to make the totals easy to compare. Any module can be added or removed.

	ESSENTIAL	RECOMMENDED	COMPLETE
Platform	Option A	Option A	Option A
Buying	Synced "Buy at DrCare" links	C1 · VitalCare cart, DrCare checkout	C2 · VitalCare online store
Features	None	Smart Care bundle (assistant, finder, help center, health tools) and D3 digital warranty	Everything in Recommended, plus D7 Community Pro, D8 English, D10 app account and D14 analytics
Monthly	Care	Care, SEO Growth, AI assistant care	Care, SEO Leader, AI assistant care
Free app device integration	**Included**	**Included**	**Included**
Time to launch	About 15 weeks	About 18 weeks	About 24 weeks
One-time	**$19,800**	**$30,900**	**$47,200**
Monthly	**$280**	**$1,610**	**$2,360**

Timeline and payments

Option A in about 15 weeks, followed by a 30-day warranty. You see progress every week on a staging site. Each payment is tied to something you can check: approved designs, a working staging site, and the live launch. Add-ons run alongside where possible.

ITEM	STANDARD PAYMENT TERMS
Option A	4 × 25% ($4,950 each): at signing, design approval, staging ready and launch.
Option B	40% at signing, 30% at design approval, 30% at launch.
Add-ons	50% when work starts, 50% on delivery.
Monthly services	Billed monthly in advance, from launch.
If you prefer to spread it	Option A can also be paid in 6 equal monthly instalments of $3,300 during the project.

We are fully flexible

If the budget or timing calls for a smaller first step, we can adjust the scope and the amounts to suit you. We can launch the homepage and the most important landing pages first and add the rest in a second phase, reduce the number of templates, start with the DrCare links and add online orders later, or spread payments over more months. Every module in this proposal can be added later without redoing earlier work.

15 · FINE PRINT

Assumptions and next steps

Assumptions

- Prices are in USD and exclude taxes and third-party fees (cloud hosting, licences, AI usage, payment, shipping, invoicing, WhatsApp and email providers).
- The design covers the desktop homepage. We design the other pages and screen sizes in the same style.
- Base site in Spanish. English is add-on D8.
- VitalCare provides copy and images for new pages (or approves our drafts), product data and manuals, and a qualified reviewer for health content.
- Two revision rounds per design deliverable.
- VitalCare owns all source code, designs and content after final payment. Hosting accounts are in VitalCare's name.
- We build in support for COFEPRIS advertising requirements and Mexico's data protection law. Legal review of texts remains with VitalCare.

What we need to start

- Brand assets and the source file of the homepage design
- Access to the current WordPress site and its hosting
- Access to Google Search Console and Analytics
- Read access to DrCare's Shopify catalogue (a custom-app key), arranged with DrCare
- One decision-maker for approvals

Next steps

1. Review this proposal and the audit.
2. A 30-minute call to answer questions and choose the option and modules.
3. We send the final scope and agreement.
4. Kick-off within one week of signing.

Our recommendation is Option A: a Next.js (React) website with a Python FastAPI backend, built for people, for AI search and for AI agents, and connected to DrCare and the VitalCare app. It is the platform we would choose if this were our own brand.

The choice is yours. Whichever option and modules you choose, we will deliver them to the same standard we brought to the VitalCare app, and we're happy to shape the scope and payments around what works best for VitalCare.

Navneet

VitalCare mobile app team

Quotation VC-WEB-2610 · 25 October 2026 · valid until 24 November 2026. Audit figures were measured on 24–25 October 2026 and will change as the live site changes.
